

INSTRUCTIONS PERTAINING TO RISK OF FIRE OR INJURY TO PERSONS. READ ALL INSTRUCTIONS. IMPORTANT SAFETY INSTRUCTIONS. SAVE THESE INSTRUCTIONS.

DANGER - RISK OF SHOCK - DISCONNECT POWER BEFORE INSTALLATION! Please read all instructions before installation.

- Keep these instructions for future reference.
- Must be installed by a qualified electrician in accordance with national and local standards. Designplan is not responsible for fixtures installed without regard to these standards.
- Unauthorized alterations or tampering of product voids warranty.
- The main power connection must be in accordance with local electrical codes.
- Suitable for OUTDOOR applications.

IP67 IK06

Electrical Connections:

- LED lights must be **connected in parallel** respecting polarities.
- **CHOOSE POWER SUPPLY ACCORDINGLY.** Please consider the voltage through which fixtures are fed as well as the max power consumption.
- **Connect power only if all the fixtures are connected.**
- The power supplies **MUST** be installed in aerated rooms, far from heat sources. Overworking or lack of air circulation will not permit natural dissipation.
- Use only Class 2 type electronic power supply.
- Never use switches on secondary circuit.

ATTENTION: For In-Grade - It is the contractor's responsibility to seal the conduit with "Great Stuff" aerosol seal that prevents water and moisture penetration for ultimate protection. Contractor **MUST** use gel-filled wire nuts.

Maintenance

Scheduled maintenance must be carried out once a year on all lighting devices, regardless of appliance class and type of use. It must include the following operations:

- Check that the glass or plastic lens is intact, and replace it if broken or damaged.
- Check that all cable glands and cables are intact and tightly secured.
- Check tightness of screws on various parts of the device.
- Periodically clean the fixtures to remove the built-up dirt from gratings and screw heads.
- For class II fixtures, check any plastic/insulating casings, to determine any damage to the insulation.
- Check for any water that may have collected inside the fixture or its outer casing.
- The internal components such as the ballast, transformer, driver, washers and screws must not show clear signs of oxidation or rust. Clear traces of rust and oxidation will indicate the presence of water inside the device.
- In the case of damage, the components must be replaced by original components or spare parts.

NEVA MINI 6, 6.0, 6.1, 6.2

10W, 20W, 30W, 50W, REMOTE 24VDC

designplan®

installation instructions

Connect to mains power using a suitable terminal board inside a connection box with the correct ingress protection, in accordance with systems regulations.

- It is the contractor's responsibility to install Remote Driver in a suitable electrical enclosure.
- It is the contractor's responsibility to caulk around the edges in between the fixture and the mounting surface, to satisfy wet label requirements (For Surface mounting applications).

Use gel-filled waterproof wire-nuts for wire connections.

ACCESSORY INSTALLATION

Surface Mount Bracket (WM0601-W0602)

It is the contractor's responsibility to waterproof seal all seams of fixture, to satisfy wet label requirements.

Wiring Diagram

The individual lamps must be connected in parallel. Only power up the system once all the lamps have being connected.

- Only power up the system once all the lamps are connected. Connecting an individual lamp to an active power supply may cause the lamp to break due to over-voltage.
- Lamps and power supply units must be installed in well-ventilated boxes or locations to allow a natural heat diffusion and avoid the devices overheating.
- On the power system, install a surge protection device to reduce the intensity of any voltage spikes to protect the lighting fixtures from the risk of damage.
- Fixture NOT suitable for covering with thermally insulating material.
