

Just like a single wave will dissolve in the endless ocean, the Wave wall light fixture will blend effortlessly with both traditional and contemporary interior designs. Offering comfortable indirect lighting, the luminaire is ideally used to illuminate circulation zones. In order to ensure installations that remain free of plaster cracks, the truly trimless and fully paintable fixture is made of CALCYT® plaster that shares the same thermal expansion characteristics as regular plaster or plaster-board. Wave never dominates your interior architecture, but takes a backseat approach, that allows you to combine the wall light with architectural chandeliers and other prominent design elements.

WAVE LED 2000 LM 350mA

REF N° 316 04 000 remote 2700°K

REF N° 316 04 100 remote 3000°K
