SPRITZ

LAM32
IDEAS BECOMING LIGHT

Rechargeable table luminaire, suitable for LED light sources. It is composed of an aluminum head and steel stem treated with a painting that ensures durability over time and maximum resistance against atmospheric agents. Touching the head switches it on and it is also dimmable to 3 levels, with battery autonomy >7H (device on full performance) and >10H (on first dimmable level of luminaire). LED housing is closed by satin PMMA and screenprinting. Completing the product, an RGB LED source for signaling battery status. For the nonmagnetic surface, the metal base is supplied as an accessory. Battery group inside the stem. Completed with battery charger.
