

Ulisse

BETWEEN WEIGHT AND LIGHTNESS

The pursuit of originality and the authenticity of Made in Italy by Diomedea find expression in Ulisse, a new decorative element that seems to emerge from sculpted stone.

Like the mythological hero from which it takes its name - symbol of tenacity, strength, and resilience - Ulisse stands out for its compact and determined character: a solid presence that embraces the light source in a refined dialogue between weight and lightness.

Quarried in Tuscany, from the Cardoso stone caves in the heart of the Apuan Alps Park, the rock is composed of quartz, mica, and chlorite.

This extremely durable material resists weathering and impact, making it ideal for outdoor applications.

Its grey-bluish tone, with its subtle lighter veins, together with the textured quality of its stratification, gives Ulisse a timeless elegance in perfect harmony with contemporary architecture.

The installation requires the use of dedicated stainless steel anchor bolts (supplied with the fixture).

A concrete foundation must be provided beneath the product to ensure stability, and the suitability of the installation must be verified according to the type of surface available.

Ulisse weighs approximately 30.9 lbs; it is mandatory to prepare a small concrete foundation to provide stability to the installation. It is also extremely important to follow each installation step precisely in order to preserve the aesthetic impact of the product.
